EDUCATION

SYRACUSE UNIVERSITY

2025-June 2026

- Applied Data Science, MS

AMERICAN MILITARY UNIVERSITY

2019-2022

- Strategic Intelligence Studies, BA
- GPA 3.87/4.0

COMMUNITY COLLEGE OF THE AIR FORCE

2017-2019

- Intelligence Studies, AA

CERTIFICATES

- Google Data Analyst Professional
- Google Advanced Analytics Professional
- Google Business Intelligence Professional
- IBM Data Analyst Professional

CORE COMPETENCIES

- Programming
- Machine Learning
- GenAI
- Data Analysis
- Data Visualization
- Business Applications
- Effective Communication
- Critical Thinking
- Adaptability
- Data Ergonomics

PROGRAMMING LANGUAGE

- Python
- R
- SQL
- Oracle

PROFILE

Data Analyst & AI Systems Specialist with 14 years of Air Force mission-critical systems experience, specializing in designing and operating AI-assisted data platforms in regulated, industrial environments. At Air Liquide, I build production-grade tools that translate complex Oracle ERP and operational data into auditable, decision-ready systems. My work sits at the intersection of analytics, applied AI, and data infrastructure, with a focus on human-in-the-loop design, governance, and scalabe transformation.

WORK EXPERIENCE

Air Liquide — SEP 2024 - PRESENT

Data Analyst

- Designed and deployed AI-assisted internal applications supporting warehouse capacity modeling, pricing reconciliation, and Tier II regulatory compliance at the Dallas Chemical Center (DCC).
- Architected end-to-end data workflows integrating Oracle R12 extracts, Google Workspace, and custom scripting to deliver auditable, decision-ready operational insights.
- Built and operate a warehouse capacity and financial modeling platform used by planners and supply chain teams for real-time inventory and cost visibility.
- Resolved multi-million-dollar pricing and cost discrepancies by reconciling invoice price, item cost, sales price, and transactional movements across systems.
- Applied human-in-the-loop AI for decision support, ensuring domain-aware validation, traceability, and governance alignment rather than blind automation.
- Led hands-on enablement sessions for planners and operations teams on internally built tools, accelerating adoption while maintaining system integrity.

Oeson Learning — JUL 2024 - SEP 2024

Data Science Intern

- Completed 7 end-to-end data science projects (~175 hours) using Python and R for statistical modeling, machine learning, and data visualization.
- Developed advanced proficiency in data cleaning, large-scale analysis, and implementing machine learning solutions for real-world business problems.
- Earned a formal recommendation from the program mentor highlighting technical expertise, analytical rigor, and problem-solving ability.
- Received ~42 hours of 1:1 mentorship from a LinkedIn Top Voice with 7+ years of industry experience, deepening applied knowledge and career readiness.

United States Air Force — MAR 2022 - NOV 2024

Designated Expert- Aircraft System Integration

- Led a 55-member engineering team on a $27.6M Special Operations aircraft upgrade, delivering mission-critical systems on time under high operational pressure.
- Designed and instructed advanced telecommunications and signals intelligence workflows for joint-force operators and analysts, improving mission readiness.
- Built and optimized data systems supporting global crisis response, ensuring compliance, traceability, and real-time decision support.
- Processed and analyzed operational intelligence across multiple deployments, aligning technical execution with strategic objectives.
- Recognized for cross-functional leadership, systems innovation, and ability to distill clarity in complex, high-risk environments.
